

Training

WiebeTech LLC began developing products for the forensic market in 2002. At that time the FireWire DriveDOCK™ was merely a device intended to allow the user to easily connect a bare hard disk drive to a computer via a FireWire connection. The idea of using the device in an investigative manner was not even in the description of uses. After a year or so, we were challenged to make the device write blocked. After a fair amount of development, the Forensic DriveDOCK™ was released. There has been no looking back.

Today WiebeTech has a full line of forensic products for imaging data and for the storage of that data. The need for forensic investigators and tools for performing the task is growing exponentially. We have continued to grow and expand our offerings and are now ready to offer training on their use and capabilities. No product has a greater need for training than HotPlug™. To date, no one has created a product to equal the innovation and ease of use. However, one must consider that this product is used in an environment using electricity, therefore extreme care should be taken. With proper training, this tool broadens the scope and capabilities of forensic investigation.

Introduction to Mouse Jiggler™

A new tool developed by WiebeTech™ that prevents a computer from going to sleep. Mouse Jiggler prevents idle time events that can make a demanding investigation even more difficult. It sounds simple enough, but every day more reasons are discovered for using this handy little tool.

Introduction to Hot Plug™

WiebeTech's new HotPlug LT allows hot seizure and removal of computers from the field to the lab. HotPlug LT keeps power flowing to the computer while transferring the computer's power input from one A/C source (such as a wall outlet or power strip) to another (a portable UPS) and back again.

HotPlug in different scenarios

Not all seizures are alike. An investigator may be confronted with various methods of power access for the computer(s) that need to be seized. WiebeTech has tools for varying methods of switching power.

Training in the use of the various tools associated with HotPlug.

There will be complete training for getting used to the different tools that can be used in conjunction with HotPlug. Also, how to detect wiring configurations of circuits.

Introduction to HotPlug™

About the Instructor

As WiebeTech’s first full-time employee, Michael Gaskins brings a diverse professional background to the company. Michael has worked in all phases and areas of WiebeTech, most recently as International Sales Manager, traveling to Europe and working with customers worldwide. With years of experience selling and supporting WiebeTech products, he is uniquely qualified to train on the set-up and use of the many products offered.

One Day Training Schedule

Session Begins	9:00 am	Introductions Live capture concept Mouse Jiggler HotPlug™
Break	10:30 10:45	Power strip transfer Electrical Wiring 101
Lunch	12:00 p.m.	Plug Capture Device Outlet seizure method Wire splitting method
Break	2:30 2:40	Hands on workshop
Test	4:30	Written test Presentation of Certificates
Conclusion	5:00	Dismissal

Upon completion of the WiebeTech Academy Training session, participants will be issued a certificate stating they have been trained by an official WiebeTech Training Specialist in the prescribed safe use and capabilities of the WiebeTech HotPlug and Mouse Jiggler.
