On the grid

The suspect computer in this example is plugged into a power strip, which is plugged into the wall. This type of capture is very easy with a WiebeTech HotPlug.

If the suspect computer is plugged directly into the wall, other HotPlug accessories will be necessary.

Step 1

Plug HotPlug into the UPS battery, then into the power strip and turn it on.

Step 2

Unplug the power strip from the wall (it's ok!). HotPlug will intelligently and instantly reroute power from the UPS to the power strip. Then plug the power strip into the HotPlug.

Step 3

Disconnect HotPlug. You may now use the same HotPlug to seize additional computers.

The suspect Computer is now powered solely by the UPS and was NEVER shut down!

Do not attempt this without HotPlug. This cannot be accomplished with only a UPS (Bad things will happen).

WARNING:

Risk of electric shock. Live terminals exposed during normal usage can carry sufficient voltage that would be harmful to particular sensitive persons or those wearing a pacemaker. Care should be taken during use of HotPlug and WiebeTech recommends product training.
